## MAGUS PRO DISTORTION

Classic High Gain Distortion Pedal with Fat Mids, Treble Filter Control and 3 Clipping Modes

- 1. OUT** – Send the signal to other pedals or a guitar amp via ¼" cable.
- 2. 9V DC** – Connect a standard 9 V power supply (not included). The pedal does not accept batteries.
- 3. IN** – Connect your guitar via ¼" cable.
- 4. GAIN** – Adjusts the amount of distortion and saturation. Due to low slew rate of the opamp, more gain will result in a darker tone.
- 5. LED** – Lights when the pedal is engaged.
- 6. VOLUME** – Adjusts the output level when the pedal is engaged.
- 7. MODE switch** – Selects distortion mode:  
CLASSIC = High-gain distortion  
FAT = Boosted low frequencies  
TURBO = Engages LED clipping diodes for more output and increased headroom.

- 8. FILTER** – Cuts high frequencies as the knob is turned clockwise.
- 9. FOOTSWITCH** – Press to engage or bypass the pedal. True bypass leaves the guitar signal completely unaffected whenever the pedal is not engaged.

## Specifications

### Connectors

Input	¼" TS, unbalanced
Impedance	1 MΩ
Output	¼" TS, unbalanced
Power input	Standard 9 V DC, center neg, 40 mA

### Physical

Dimensions	99 x 57 x 56 mm (3.9 x 2.2 x 2.2")
Weight	0.29 kg (0.64 lbs)
